

**Mounting instruction for
Seat occupancy emulator BMW:**

- 1 E87 2004 –
- 3 E90, E91, E92, E93 2004 -

The easiest way to mount our emulator is:

- Plug off your battery
- Please look for this connectors under your passenger seat:

- Plug off the connector of the seat mat
- Mount our emulator (the same connector) instead of your broken passenger seat mat. FINISH!
- In the next step you have to mount the belt-simulator (Gurt-Simulator). Please continue on page 2.

After correct installation you have to delete the fault-memory of your car in a garage. The garage must connect your car to the "diagnostic-system". After that the Airbag light goes off.

Important Information:

**This emulator can be mounted instead of a passenger seat occupancy mat.
If it's installed correctly, the airbag-system works fine and the passenger airbag will open in a accident.
The passenger-airbag opens also when the passenger seat is not occupied by a person!**

**SAFETY INFORMATION:
It's not allowed mounting a child seat if the emulator is installed!!**

Mounting Instruction Belt-Simulator (Gurt-Simulator) for BMW E87, E90, E91, E92, E93

The easiest way to install is under the passenger seat. Please search for this yellow connector and disconnect it:

Then pull off the 3 connectors (2x grey, 1x black):

Now we are looking for the grey connector like in the picture with "L-form":

Pull off the 2 wires (black & red) with a screw and mount the belt-simulator (Gurt-Simulator) instead of it:

Now you are finished. You can mount the big yellow connector back like in the first step.

Don't forget: "Click it or ticket". It's important to wear the seat belt!!! Don't forget! It's your safety!
